Letter of Recommendation

To Whom It May Concern,

I am pleased to write this letter of recommendation for **Bereket Alemayehu**, who has worked under my supervision on multiple digital health projects with a strong focus on DHIS2 and mobile application customization.

During our collaboration on the **PRIZER project**, Bereket played a key role in **DHIS2 metadata customization**, including configuration of programs, data elements, indicators, and program rules. He demonstrated a solid understanding of DHIS2 architecture and metadata dependencies, ensuring that system configurations aligned well with programmatic and reporting requirements. His work significantly contributed to improving data quality, usability, and overall system performance.

In addition, on the **CBHI (Community-Based Health Insurance) project**, Bereket Alemayehu was involved in **customizing a Flutter-based mobile application**. He showed strong technical competence in adapting the application to project-specific workflows, improving user experience, and ensuring seamless integration with backend systems. His ability to translate functional requirements into practical technical solutions was particularly commendable.

Beyond his technical skills, Bereket has **excellent communication skills**. He communicates clearly with both technical and non-technical stakeholders, actively participates in discussions, and responds constructively to feedback. This made collaboration smooth and effective across multidisciplinary teams.

I recommend him without reservation. Should you require any additional information, please feel free to contact me.

Sincerely,

Redet G. Assefa
